

ABSTRACT OF THE DISCLOSURE

An apparatus and method of delivering bubble solution to a bubble solution dipping container are disclosed. The apparatus has a housing, a dipping chamber associated with the housing, a source of bubble solution and a tube coupling the source of bubble solution with the dipping chamber. The tube has one end positioned inside the dipping chamber and another end coupled to the source of the bubble solution. A blocking ceiling can be positioned in the dipping chamber over the end of the tube so as to deflect bubble solution ejected from the end of the tube into the dipping chamber.
